

Imagine a camp stove that you need not carry any fuel to use. Imagine a sturdy, 18 gauge stainless steel camp stove that can produce heat for warming yourself and function as a cooking source yet folds flat for easy packing. Imagine no more, the Firebox Folding Camp Stove is here!

What is a Firebox?

The Firebox is a multi-purpose Super Tool for fire. It's a Multi-fuel Cook Stove able to utilize wood and other fuels found in nature, solid fuel tablets, alcohol burners, gel fuels (Sterno), wood pellets or charcoal briquettes. It's also a portable no trace campfire, a grill or even a specialized boiling system. The Firebox's larger size and sturdy construction makes it stable enough for a large dutch oven yet it can be used with cookware as small as a camping cup. The Firebox is also easy to set up. It effortlessly opens into position, and when it's time to go it folds flat - ready to slide into your pack.

Why is the Folding Firebox the best choice?

- **Made in U.S.A.**
- **Easy**- Simply opens into position. No assembly of separate parts needed
- **Safe**- Larger size is stable even with big heavy pots & pans
- **Heavy Duty**- Made of 18 gauge stainless steel
- **Compact**- Only 1/2 inch thick when folded
- **Versatile**- Multi-fuel and adjustable cooking surface to accommodate small to large cookware
- **No trace**- Ash pan is up off the ground, so it won't leave a fire scar
- **Affordable**- Reasonably priced
- **Adjustable**- Easy to control cooking temperature

What people are saying about the Firebox.

While searching for a wood burning stove to use with my emergency kit I stumbled across a review for this steel box called the "Folding Firebox" on Youtube. Soon my original plans were in the bin and I bought the Firebox. I'm glad I did as without a doubt this is one of the best wood/multi fuel stoves on the market. Capable of burning anything from twigs from your yard/campsite to solid fuel tablets, gel fuel cans, recycled wood fuel blocks to charcoal briquettes. -Malc

I'm very pleased with the sturdiness and thickness of the steel in the design of this stove. Very solid and will hold up plenty of weight. The opening up and fold-down of the stove is impressive. After starting a fire the first usage of the stove was to melt and boil a pot of snow for drinking and for cooking some dehydrated food. The way you designed the vents aided in creating a very hot and well directed fire. It didn't take long to get the water boiling. -Billy Hoffman: disabled, combat veteran of U.S. Naval Special Warfare

I tried the product. It's amazing. Perfect. Design, all perfect. The weight is not a problem because is more solid and durable. I boiled 1 liter of water in 4 minutes. It's the best stove I tried. you have done an excellent job. Continue in this way. I'm very happy to have two stoves so i can cook more things. I'm happy to have bought it. I tell all my friends about it. I'll post a lot of videos. I wish the second stove will arrive very soon. Thank you for everything. -Mr. Califano

I purchased two of your stoves and I love them. I like them better than the more flimsy stoves made from many separate panels that I have seen. -John Louis Andries
